# xGeo™

Recent years R&D and verification now enables MontLibre Group with international partners to present xGeo™. World's first system integration of two ground-breaking science- and technology innovations.

Pulsating Electromagnetic Sounding "PEMS™" the innovative proven digital mobile system for advanced, high-efficiency digital scanning and explorative investigations of planet earth's deep bedrock. This, to visualize exactly where and how we can find and explore the critically sought-after natural resources. Water, critical energy minerals/metals, natural clean geothermal heat as well as rare-earth and other highly valued natural resources in the ground.

APID™ advanced fully autonomous drones, performing complete vertical take-off and landings, 5 hours long range precision flights of over 400 km, payload capacity 200 kg, operated autonomously from mobile operator pods.

Integrated together xGeo™ delivers the complete xGeo™ Solution-as-a-Service – "SaaS" -platform revolutionizing all forms of geological resource localizations and explorations.
